- Earnings growth and rupee depreciation

 INDICATIVE INVESTMENTS

- US Tech : Amazon, Google, CrowdStrike
- Non-US tech : ASML, Tencent
- Non tech : Hermes, Eli Lilly, John Deere

Indian equity markets have consistently outperformed over the long term; PMS generally performs better than broader equity markets

PMS have consistently outperformed mutual funds by 4-5% over long term

Yearly returns since inception for top 10 Mutual Fund and top 10 PMS Schemes along with their Assets Under Management (AUM)

Returns of top 10 Mutual Fund Scheme

Returns of top 10 PMS Schemes

Today's value of Rs. 1Cr if
invested in year 2000

Rs. 36Crs

Rs. 80 Crs+

A 4-5 % difference in returns has very
high impact on end value of investment in long term

Source :
PMS performance data & assets under management : SEBI and Association of Portfolio Managers of India
Mutual fund performance and assets under management : Association for Mutual Funds in India

PMS outperformance over MFs has made it a preferred channel for wealthy investors

PMS have more flexibility compared to Mutual Funds which leads to outperformance

When a company with 3% allocation grows 5x in 3 yrs, mutual funds keep selling it as they do not let weightages increase beyond 4-5%. PMS typically ride the 5x journey and do not sell easily.

Schemes in MFs are very large, with Rs. 50-80k Cr in assets. At scale, they are not able to invest adequately in small/mid sized cos and have to overdiversify to ensure easy entry & exit. PMS, due to lower scale, can easily enter/exit. E.g. A typical small/mid cap fund has 50-75 companies vs. 15-20 companies for PMS.

MFs charge fixed fee of 2-2.5% per annum so investors pay fee even when portfolio produces negligible or negative returns vs PMSes make performance fee only when investors make returns.

Equity PMS industry is ~40% of equity investing market; mostly used by affluent and HNI investors

Total Equity investments in India	via Mutual Fund's ~60%	via PMS ~40%	Rs. 70L Crs
Amount of Assets	Rs. 40L Cr	Rs. 30L Crs	
Count of Investors	5Cr+ investors	<5Lac investors	
Average investment per investor	Below Rs. 10Lac	Above Rs. 75Lacs	

PMS has been an instrument of choice for wealthy individuals, family office and endowments largely due to its better performance and higher flexibility

At Ironclad PMS, we invest in companies with strong fundamentals; at entry prices which have reasonable margin of safety

Portfolio Construction :Compounders for the core growth, special situations for alpha

	Financials	New Age / Tech businesses	Brands	Niche Manufacturing
Compounders : 60-70% allocation - Grows earnings at 18-25% p.a. - Core of the portfolio	 Financials grow at ~2x GDP consistently  20+yr track record of outperformance with strong governance across public and private markets  Diversification from multiple subsectors within financials like Banks, NBFCs, AMCs,	 Highly scalable; Network effects strengthen as companies scale  Companies focus on fast growth instead of just compounding with economy  50-60% of US/China market cap is digital; India has a 10-20 yr catch-up runway.	 Brand-building is magic — 2 of 10 work; Once they work, it generally is difficult to disrupt  60-90%+ gross margins; almost always debt free  Value prop is customer trust, not cost (Dr Lal, Tanishq, Mankind, Bikaji, ITC)	 China+1, defense indigenization and Make-in-India drive growth.  IP ownership drives structurally high margins.  Multi-year qualification cycles and long term contracts provide order-book visibility
Special Situations : 20-30% allocation - Potential to become 2x in 2-3 years, partly from rerating	Example : Market Perception that housing NBFCs were structurally impaired by sector-wide growth and asset-quality concerns, driving sharp deratings. However, in reality select companies kept compounding AUM at ~25% p.a., with sub-0.5% credit costs and 20%+ ROEs — classic sentiment-driven mispricing.	Example : Market Perception that regulatory action had permanently impaired the business, sparking existential fears. However, in reality cash and the PayPay (Japan) stake covered most of the market cap — leaving the core business effectively free.	Example : Market Perception that slowing growth signalled demand destruction, spooking investors. However, in reality consumer pull remained strong — a one-time channel inventory correction, not fundamental impairment.	Example : Market Perception that weak margins and stretched working capital signalled poor earnings quality. However, in reality both stemmed from one-time acquisition costs — the underlying business and capital cycle were sector-normal.
Portfolio Allocation	30-40%	15-25%	15-25%	10-15%

Diversified allocation across Banks & Financials, Insurance, Consumer, Pharma, New Age companies and Manufacturing businesses

Current Sectoral Allocation

Split across large, mid and small caps. Strategic overweight to small caps for alpha generation

Ironclad Flexicap India PMS outperforms NSE 500 in a difficult market environment

Ironclad Flexicap+ PMS Performance

- Outperformed through a turbulent ~18-month cycle** : Ironclad PMS has delivered ~15.2% return (~8% higher than markets) through one of India's most challenging stretches, including US tariff shocks, the Iran-Israel conflict, INR depreciation, record FII outflows. Implied total return is ~25% for PMS and 12% for Nifty 500 in this same period.
- ~3-5% sustainable alpha: our long-term post-fee target** : We deliberately target a consistent ~3-5% annual outperformance over the benchmark on a post-fee basis — achievable through quality stock-picking without excessive risk, and one that compounds significantly for long-term investors across a full market cycle.

Delivering superior risk adjusted returns; we typically fall 70% of what market falls, gain 90% of what market gains

RISK-ADJUSTED METRICS

Protecting Capital When It Matters Most; PMS has outperformed markets in down months

We look at companies in much more depth than what is available to retail investors in general

01

Institutional Research

Direct access to institutional research from top global and domestic firms— the same estimate revisions and coverage FIs and MFs track and trade on, which are not available on retail investors or on retail platforms like money control / screener

02

Paid Expert Calls

\$500–\$1,000 per call with ex-employees, channel partners, and industry specialists to get up to speed on a company or sector before committing capital.

03

Sectoral Comps

Live, continuously updated comp sheets across every sector we cover — so every name is judged against its actual peer set, flagging when we're overpaying or a stock has run too far.

04

Ongoing & Quarterly Tracking

Management commentary tracked against delivered results, quarter over quarter, with a standing 12-month and 2–3 year estimate for every company held.

05

Alternate Data

Web traffic, app download trends, hiring velocity on job boards, and other non-traditional datasets used to read a company's trajectory before it shows up in reported numbers.

06

Industry Network

Built over years of full-time coverage — analyst days, roadshows, and industry conferences with the same management teams and operators, not a one-off call before a decision.

Case Studies of our Investment Successes

Case Study 4: We bought Honasa into a misplaced inventory-write-off panic

*Re-rating driven by inventory normalisation
and category-leading growth*

Investment Thesis

- **Faster-growing than FMCG peers.** Honasa is scaling well above the staples/FMCG pack, led by Mamaearth and a fast-growing portfolio of newer brands across digital-first channels.
- **Market over-penalised a one-off.** The Street excessively wrote the company off on the back of an inventory write-off, treating a transitional, one-time correction as a structural break in the franchise.
- **Primary diligence confirmed quality.** Founder conversations and on-the-ground channel checks pointed to a strong, well-run franchise with intact demand — giving us conviction to build the position at depressed prices.

Case Study 1:

We underwrote change at AB Capital — and benefited from market re-rating

	<u>Entry</u>	<u>Current</u>	<u>Change %</u>
BVPS	103	123	20%
P/B	1.6	2.9	88%
Price	160	360	125%

Price return driven by 20% BVPS growth and 88% P/B re-rating

Investment Thesis

- **Entered when new CEO** (Mrs. Vishakha Mulye, with strong past ICICI track record) started to drive change and show results. business shift towards retail + operating leverage drove profitability. NBFC NIM + fee up to 6.1%, HFC RoA expanded to 1.82%, management guiding 2.4–2.5% RoA in the medium term — a step-change from historical performance.
- **Embedded value mispricing** AMC and insurance embedded value was underappreciated in consolidated valuation. The embedded businesses scaled (Life Insurance: +19% YoY, VNB +72% YoY ; Health Insurance: Premium +31% YoY; AMC: AUM +11% YoY).
- **Market Re-Rating Followed Fundamentals** —As execution de-risked, the stock rerated from ~1.6x P/B at entry to ~2.9x, consistent with the our expectation of a re-rating.

Case Study 2 : Early Entry into EV adoption delivered ~2x returns in 8 months

ATHER

	At Entry	Current	Remarks
Overall market share	~13.6%	~18%	Expanded market share
Ranking	4	3	Went ahead of Ola 2W for 1 st time
Units Sold	~40000	~70000	
EBITDA	-20%	-10%	COGS down significantly leading to EBITDA uptick

Investment Thesis

- **Low EV penetration in India** : Entered with EV penetration ~5% in 2W scooters versus >80% in China, implying long growth runway.
- **Regional leadership**: Strong #1 position in South India (~25%) with expansion underway across other states as EV adoption grows - leadership migrating to other states like Gujarat, MP as well.
- **Product-led differentiation**: Focused portfolio with limited SKUs, strong product quality, and premium brand positioning. Management also more focused on core biz.
- **Valuation re-rating**: Starting to reduce position after sharp re-rating ahead of fundamentals with valuation stretched at ~9x P/S (vs peers like Hero, TVS, Bajaj at 3 to 4x)

Case Study 3 : Turning balance sheet mispricing into ~1.8x returns

Investment Thesis

- **Deep balance-sheet discount:** Entered when Paytm's market value was significantly backed by cash (~₹10,000 cr) and its stake in PayPay Japan (~₹2,000 cr). Market was not valuing its payments business well.
- **Payments bank drag limited:** Post regulatory overhang uplifted, Paytm has re-accelerated its core engine with GMV up ~28% YoY and shifting focus from user acquisition to higher-quality customer monetization. Strong distribution across loans, credit cards, and financial products offered monetisation and earnings upside. RBI also granted in-principle Payment Aggregator license to Paytm subsidiary, improving growth visibility and investor confidence.
- **Starting to show in P/L:** EBITDA turned positive at ₹1.41 bn, PAT turned positive; analysts forecast EBITDA ₹21.4 bn and PAT ₹22.3 bn by FY28. Market has now begun to price this transition.

Case Study 5:
We skipped the IPO and entered WeWork India after a ~30% correction

wework

Entry	Current	IRR
₹430–450	₹650+	+40–50%

Investment Thesis

- **Skipped entering just after IPO** : Listings typically price at peak valuations that compress post-listing; we waited for the correction before choosing to enter.
- **Premium brand, premium pricing.** 2x pricing vs peers on the back of the WeWork brand, Grade-A locations and Embassy sponsorship — the company competes on quality and enjoys premium pricing due to this.
- **20% revenue visibility + margin expansion.** 20% capacity already signed for next year and contractual 6% price hikes; operating leverage and a rising managed-office mix drive EBITDA margins higher, which ultimately leads to re-rating for company

Active portfolio management needed as leading companies / sectors keep on changing

Our understanding of digital cos allows us to pick winners in digital ecosystem; Important to participate in digital ecosystem as it grows to become large in India

50%+ market cap in US is from digital companies; much lower in India; India expected to follow similar path

Our understanding of digital ecosystem allows us to pick winners

- Within new age, we invest in companies which
 1. Deliver world-class customer experience through digital channels across discretionary consumption, financials, and healthcare.
 2. Use new-age disruptive business models to outgrow their traditional rivals in similar line of businesses;
 3. Incumbents emerging as tech leaders via digital adoption and R&D
- Strong demand & supply side networks create moat for these companies ensuring there are 1-2 leaders in each category :
 1. Naukri.com in “Recruiting” as most job seekers and companies which wish to hire are on the platform.
 2. Zomato /Swiggy have high restaurant & delivery fleet density in all major cities which reduces delivery time to minutes; this makes entry of new competitors very difficult
- These companies get impacted by market swings much more than others; These swings open up opportunities to enter at low valuation, at times much lower than their private round values.
- Our background in tech/ new age companies and network within digital ecosystem allows us to understand these companies well and participate in their growth journey.

Team experienced across investing domains

Krishna Killa
*Founder & Fund Manager,
Ironclad Asset Management*

Setup and leads Ironclad AMC
Building a proprietary framework which prioritizes capital preservation while generating alpha in long term

Worked as Investor at Bain Capital Private Equity, one of the top Private Equity investors in world with \$100B+ in Investments

Founded and scaled healthtech company LifCare, scaling across India, raising Series B, Rs. 100Cr from leading institutional investors like Elevation Capital, Nexus Venture Partners.

Worked as Strategy Consultant at Boston Consulting Group (BCG), one of the top 2 management consulting companies in the world

Compliance Officer

7+ yrs of finance & compliance experience
Investor Onboarding & SEBI compliances

Working with India's leading financial service providers to ensure safety

- SEBI registered Portfolio Management firm
- Registration No. PM / INP000009074

Periodic reporting to ensure full transparency

- Custody Service from ICICI Bank, India's top Private Bank
- Shares are held in Investors' name in Custody Account with ICICI Bank
- All the money is held in ICICI Bank fund account

Monthly Performance statement

Holding reports at monthly intervals

- Broking from ICICI Securities, India's leading Institutional broker
- All transactions happen through ICICI Securities

Audited Statements at year end

PMS investment structure is a very safe and highly SEBI regulated

When an investor invests

On his own

Shares are in demat account in INVESTORS name in NSDL via stock broker

via PMS

Shares are in demat account in INVESTORS name in NSDL via ICICI Bank

- A PMS does not actually hold investments in its own name
- Individual INVESTOR's demat accounts are opened, investments are held in Investor's name
- PMS just has ability to decide what to buy / sell in that account on behalf of investors
- ICICI Bank and National Securities Depository Limited (NSDL) have actual shares with them

- **ICICI Bank is the Largest retail private sector bank in India**
- ICICI Bank is the sole custodian for Ironclad PMS
- SEBI regulations mandate that all client money and investments should be kept with and under control of CUSTODIAN, which for Ironclad PMS is ICICI Bank
- Individual INVESTOR demat accounts are opened and investments are held in Investor's name with ICICI Bank
- ICICI Bank does all the fund management and accounting. They calculate the fee based on client agreement and credit the same into our accounts.

All reports , accounting and custody of assets is with ICICI Bank
